ABSTRACT

An abstract is a brief summary of a research article, thesis, review, conference proceeding, or any in-depth analysis of a particular subject and is often used to help the reader quickly ascertain the paper's purpose [3]. The abstract should be no more than 220-250 words without an abbreviation.

Keywords: Please provide 5-7 keywords which can be used for further indexing purposes.

INTRODUCTION

The introduction is an important and challenging part of any research paper as it establishes your writing style, the quality of your research, and your credibility as a scholar. It is your first chance to make a good impression on your reader. The introduction gives the reader's background and context to convey the importance of your research. It should begin by broadly introducing your topic, then narrowing to your focused research question or hypothesis [1].

It also gives literature review section as a review of work related to the problem you are attempting to solve. It should identify and evaluate past approaches to the problem. It compares, contrasts, synthesizes, and provides introspection about the available knowledge for a given topic or field. It also includes the background of the research work.

Materials & Method

Research methodology defines the techniques or procedures that are used to select, identify, analyze and process information regarding a specific research topic.

The research methodology should include the following parts:

- I. Research Design
- II. Sampling
- III. Methods
- IV. A Procedure
- V. Participants, Materials etc.

Result & Discussion

The result and discussion section should present a clear and detailed description of the experimental method that might be reproducible. It also includes material sources and machines used with their name, model and configuration.

Experimental research is a powerful tool for understanding cause-and-effect relationships. It allows us to manipulate variables and observe the effects, which is crucial for understanding how different factors influence the outcome of a study. [4]

CONCLUSION

This section consists of strong statements of the work that convey important ideas to the scientific community.

Acknowledgements

The acknowledgements should be placed just before the references and after the conclusion. List here the individuals or organizations that have assisted during the research.
